LOAN ASSUMPTIONS & PARAMETERS

The following assumptions form the basis of this loan payoff projection. All calculations use monthly reducing balance method for interest computation.

Parameter	Value	Details
Interest Rate	7.54% p.a.	Monthly reducing balance method
Monthly Interest Rate	0.6283%	$7.54\% \div 12$ months
Initial Disbursal	Rs. 1,50,00,000	March 2026 - Rs. 1.5 Crores
Second Disbursal	Rs. 1,00,00,000	March 2028 - Rs. 1 Crore additional
Total Principal	Rs. 2,50,00,000	Combined disbursal amount
EMI Amount	Rs. 3,00,000	Fixed monthly payment from Apr 2026
February Prepayment	Rs. 1,00,000	Annual prepayment in February
October Prepayment	Rs. 5,00,000	Annual prepayment in October
Annual Prepay Total	Rs. 6,00,000	Combined yearly prepayment

Important Notes

- Interest is calculated on the outstanding principal at the beginning of each month.
- Prepayments are applied immediately after the EMI payment for that month.
- The second disbursal of Rs. 1 Crore in March 2028 adds to the outstanding balance.
- All prepayments should be accompanied by a request for **TENURE REDUCTION** (not EMI reduction).
- The final month's payment of Rs. 2,06,737 closes the loan completely.

VISUAL ANALYTICS

Outstanding Balance Trajectory

The chart above shows how the outstanding loan balance changes over the 91-month tenure. Notice the jump in March 2028 due to the additional Rs. 1 Crore disbursal. The consistent decline thereafter is a result of regular EMI payments combined with strategic prepayments.

Payment Composition Analysis

Year-wise Payment Analysis

The bar chart illustrates the annual distribution of EMI payments, interest charges, and prepayments. Notice how interest paid decreases year-over-year as the principal reduces, demonstrating the benefit of the prepayment strategy.

BENEFITS OF THIS REPAYMENT STRATEGY

Interest Savings Analysis

By following this prepayment strategy, you benefit in multiple ways compared to a standard loan repayment without prepayments:

Benefit	Details
Reduced Tenure	Loan closes in ~7.58 years instead of typical 15-20 years
Lower Total Interest	Interest of Rs. 61.07 Lakhs (24.4% of principal) is significantly lower than standard loan
Psychological Benefit	Being debt-free sooner provides peace of mind
Increased Cash Flow Later	Once loan closes, Rs. 3L/month becomes available for investments
Asset Ownership	Full property ownership achieved 7-12 years earlier

Why Request TENURE REDUCTION?

When making prepayments, banks typically offer two options: reduce EMI amount or reduce loan tenure. **Always choose TENURE REDUCTION** for the following reasons:

- **Faster Debt Freedom:** The loan closes earlier, freeing up your cash flow sooner.
- **More Interest Saved:** Shorter tenure means fewer months of interest accrual.
- **Compound Effect:** Each prepayment reduces principal, which reduces next month's interest, creating a compounding benefit.
- **Inflation Hedge:** Fixed EMI becomes relatively smaller over time due to inflation; maintaining it is advantageous.
- **Discipline:** Maintaining the same EMI ensures you don't reduce your repayment capacity.

Risk Considerations

- **Interest Rate Changes:** If the loan has a floating rate, interest rate increases will affect the schedule. Request updated amortization after rate changes.
- **Income Stability:** Ensure stable income to maintain Rs. 3L/month EMI + Rs. 6L annual prepayments.

- **Emergency Fund:** Maintain 6-12 months of EMI as emergency fund before aggressive prepayments.
- **Tax Benefits:** Consider Section 80C and Section 24 benefits before deciding prepayment amounts.
- **Opportunity Cost:** Evaluate if the prepayment amount could earn higher returns elsewhere (unlikely at 7.54% guaranteed savings).
